

STRUCTURAL GEOLOGY DESCRIPTION

Large serpentine Zoned peridotite

Leg	Hole	Core	Section	Observer
173	1068A	24R	1	MR

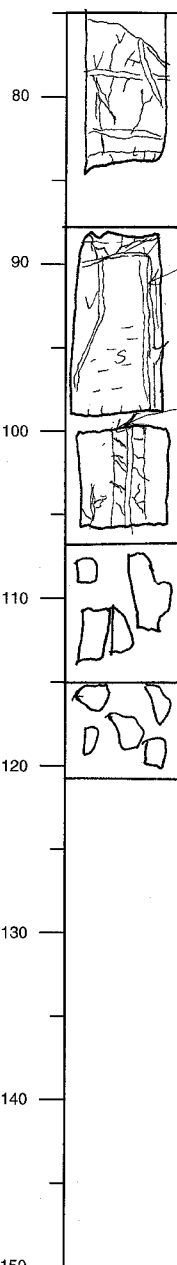

White seip. veins (thin) ~~in normal~~
to black

Thin white serpentine veins
cut thicker black (b)

Thicker greenish white veins,
with thin white veins
running along them
V=080/40

S - foliation defined
by elongate plagioclase
around spinel.

V=vertical
D=000/25

D=340/54

V - green - white serpentine
V=vertical

V=080/25
dash seip. halo around

S - foliation defined by elongate
plagioclase veins around spinels

V=vertical

~~central~~ dash seip zone
light green/white veins

V=vertical

Slickensided surfaces on
green - white serpentine coating
of fragments
